## **New continuous solutions to Monge-Ampère equations on Hermitian manifolds**

**Abstract.** This is joint work with Cuong Ngoc Nguyen. We prove the existence of a continuous quasi-plurisubharmonic solutions to the Monge-Ampère equation on compact Hermitian manifolds for measures dominated by capacity in a certain manner. In particular for moderate measures studied by Dinh-Nguyen-Sibony. We also give a characterization of measures admitting Hölder continuous quasi-plurisubharmonic potentials, as it has been done in the Kähler case by Dinh-Nguyen.
